Hand Priming Pumps

ANKA Products

QISjax (formally Ajax) Aluminium Couplings

The QISjax range (2", 3", 4" and 5") of aluminium pipe couplings are made in Australia to the highest standard using only quality materials.

The male/female design allows this coupling to be used on undulating ground and will operate at a higher pressure (150 psi) than other "straight barrel" couplings.

The couplings come with a 1" BSP threaded outlet on the top as standard.

Fast-Drain and Slow-Drain vee seals are available for all sizes except 5" where only Slow-Drain is available.

We stock a comprehensive range of spare parts available for immediate delivery ex-warehouse.
